ABOUT ME

I live in Høll with my wife Louise, our daughter Vilde, and our dog. I am at a point in life where I am looking for new challenges, both professionally and personally. It motivates me to keep developing and take responsibility in new settings where I can make a positive difference.

I have always taken great pride in delivering thorough, well-executed work. Through persistence and commitment I have achieved my results, and I thrive when I need to step up, also when things become complex. I see it as a strength that I do not hesitate to seek sparring when a task requires it, and I highly value a strong collegial community. I prioritize contributing to a positive atmosphere at work. In my view, good spirit and a constructive mindset do not only create better well-being, they also create better results.

EXPERIENCE

Embedded Firmware Developer

JE electronic A/S

Feb. 2022 – Now

Vinding

I collaborated with clients to develop products for industry and other businesses. My main product has been an intelligent rat trap that sends information about completed kills over the internet, enabling customers to send notifications to their end users. As part of this development, I also helped build supporting applications including production tools, a remote firmware update service, backend servers, and a label printer program that also generates serial numbers. The work consisted of approximately 70% firmware development and 30% software development.

Tutor, The Study Café at Aarhus TECH

Aarhus University

Sep. 2021 – Dec. 2021

IT-byen Katrinebjerg

I supported first and second semester students in the study café. The offering was for students in Electronics, Software, Electrical Energy Technology, and Health Technology programs.

Student Representative on the Academic Council at Aarhus TECH

Aarhus University

Sep. 2021 – Nov. 2021

Aarhus

Internship, toilet monitoring for people with dementia in home care

Pressalit

Feb. 2020 – Jul. 2020

Ry

STRENGTHS
